

Wrappers with integral "tear tape" for processed cheese

DESCRIPTION

Wrappers for processed cheese from aluminium foil with a thickness of 10, 12 and 14 μm coated with protective and heat-sealing lacquers have low weight and excellent barrier properties ensuring the cheese quality within their guarantee period. The wrapper features an integral "tear tape" which facilitates easy package opening. The "tear tape" is from PET film with a thickness of 19, 36 and 50 μm , commonly red in colour. "Tear tape" can be supplied in many solid colours, colourless or with a printed pattern. Aluminium foil can be supplied printed or non-printed.

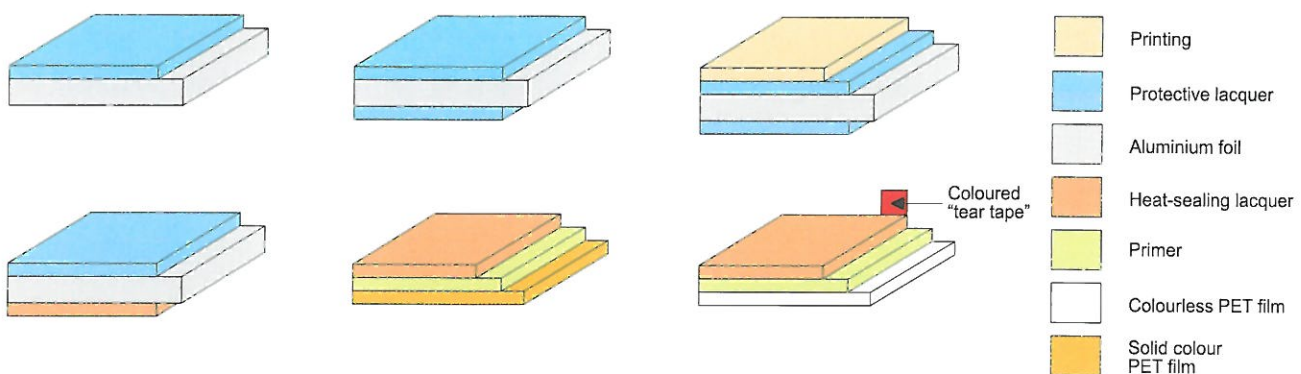

Wrappers for processed cheese with a guarantee period shorter than 2 months we offer aluminium foil with a thickness of 14 μm , one-side coated by protective lacquer or with protective lacquer coated on both foil sides.

Wrappers for processed cheese with a guarantee period of between 6 to 12 months we offer aluminium foil with thickness of 10, 12 and 14 μm , coated with heat-sealing lacquer allowing sealing at the temperature of the packed product. Integral "tear tape" is available upon request.

"Tear tape" from PET film is offered in thicknesses of 19, 36 and 50 μm , coated with primer and heat-sealing lacquer.

TYPICAL APPLICATION

- For wrapping processed cheeses with both short and long life guarantee periods.

For deliveries of any modifications of the products listed in our product specification please contact one of our Key Account Managers to discuss your individual needs.
