

Laminates for wrapping maturing cheese

DESCRIPTION

Wrappers for maturing cheese from aluminium foil featuring backing paper bonded by dispersion adhesive applied in a regular spot pattern. The wrappers guarantee the protection and the in-package maturing process of the cheese.

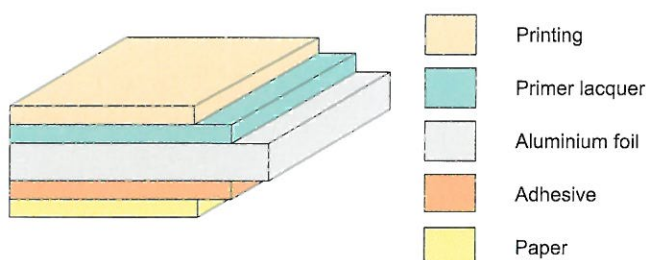

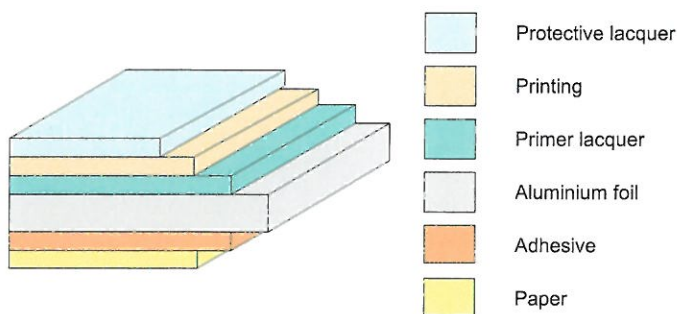

The laminates can be printed by rotogravure to a maximum of 6 colours or flexo-graphically to a maximum of 8 colours, laminates can be supplied non-printed. Laminates can also feature a slip lacquer coat giving improved performance of the laminate web during product packing and increasing print protection.

TYPICAL APPLICATION

- Packaging of maturing cheese.

STANDARD MANUFACTURED MATERIAL

- Al 9 - 10 µm / paper 30 gsm (Printed: Al foil to a thickness of 10 µm)

For deliveries of any modifications of the products listed in our product specification please contact one of our Key Account Managers to discuss your individual needs.
