

Laminates for wrapping sweets, confectionary and chewing gums

DESCRIPTION

Fruit boiled sweets, chocolate products and wafers must be protected against the influence of the light, humidity, air and the penetration of fat whilst retaining the product flavour. Production of packaging meeting these sophisticated demands has a long tradition in our company.

The foils can be supplied printed or non-printed with the option of embossing.

TYPICAL APPLICATION

- For the wrapping sweets, confectionary and chewing gums.

STANDARD MANUFACTURED LAMINATES

Aluminium foil for wrapping sweets, confectionary and chewing gums

The wrapper is of a multi-layer laminate produced by "all-face" backing or stripe backing laminating aluminium foil to paper using adhesive or wax. The aluminium foil is between 7 μm to 12 μm (10 to 14 μm for stripe backing) and paper between 20 and 50 gsm. The laminate can be coated by "hotmelt" assuring wrapper tight sealing; it can be also rotogravure printed to a maximum of 6 colours or by flexography to a maximum of 8 colours. The foil can be also supplied embossed.

For deliveries of any modifications of the products listed in our product specification please contact one of our Key Account Managers to discuss your individual needs.
