

Multi-layer packaging based on plastic film

DESCRIPTION

Packaging laminates from two, three or multi-layers of laminates produced by various base materials, for example, aluminium polyethylene-terephthalate (PET), polypropylene (BOPP), polyethylene (PE) film or paper. Multi-layer packaging has many benefits: barrier against air and moisture, aromatic tightness, mechanical stability, temperature resistance, barrier against sunlight and ultraviolet radiation.

Laminates can be printed by rotogravure to a maximum of 6 colours or flexo-graphically to a maximum of 8 colours.

TYPICAL APPLICATION

- In the food industry for the packaging of coffee, powdered drinks, rice, spices, pastes, flour, sugar, salt, potato chips, chocolate bars, frozen foods and many more.
- Packaging within the pharmaceutical and cosmetics industry.

EXAMPLES OF STANDARD MANUFACTURED MATERIAL

Duplex

PET/PE

Al/PE

Al/BOPP

PET/print/PE (contra-print)

Print/PET/PE

Print/metallised PET/PE

Triplex

PET/Al/PE

Al/PE/Al

PET/print/Al/PE

-  Printing
-  Polyethylene-terephthalate film (PET)
-  polyethylene-terephthalate film (PET) metallised
-  Polyethylene film (PE)
-  Polypropylene film (BOPP)
-  Aluminium film
-  Adhesive

For deliveries of any modifications of the products listed in our product specification please contact one of our Key Account Managers to discuss your individual needs.
